i-bowl Smart pet bowl

|instruction|

What is i-bowl?

i-bowl is a smart device which is specially designed for pets. It implements these functions by accurately scaling: more balanced feeding amount recommendation, irregular diet notification and 24h auto recording of eating data and details, which can help your pet develop a healthier and more balanced diet. i-bowl adopts animal-friendly design and is made of anti-bacteria material. It is easily washable and can be immersed in water.

The APP calculates the suggested feeding quantity of next day according to big data as well as the modeling of activity, breed, age, and weight.

⚠ Note: if you did not click the "suggested QTY"yesterday or input the activity duration, then there is no number of suggested feeding quantity. Meanwhile, there is no irregular diet notification when your pet eats too much or too little.

Brief Introduction of The Functions in APP
Power on: press the button for 3s
(zero out at boot time)

Power off: press the button for 3s

Unit conversion: click the button when the screen is lighted (g/lbs)

Standby: screen will be locked without operations for 10s

Wake up screen: click the button when the screen is locked

Scale: put dog food into i-bowl, then the screen will show a final number after few seconds

⚠ Note: In order to get the accurate data, the bowl must be power off when removing the residual food or being washed. Make sure the bowl is empty before the bowl is power on. As long as the bowl is power on, there is no impact on data record when the screen is locked.
